# Why is it important?

- Encouraging a healthy lifestyle
- Advancing gender equality
- Promoting national recognition and success
- Fostering international cooperation

# Data Sources

Datasets have been downloaded from Github, Kaggle and World Population Review, and scraped from the official Olympics website (Olympics.com), Wikipedia and Olympedia.

- The *athletes.csv* dataset contains information on the description of athletes (gender, height, weight, country, sport and the winning year) from 1932 to 2022.
- The *medalists.csv* dataset contains the same information for 2024.
- The *Olympic_host.csv* dataset contains information about the host country and the year.
- The *world-gdp-data.csv* dataset contains information on the population and the GDP of different countries for 2024.

# What are we looking for?

1. Top 10 countries that have received medals in the last 20 years (*athletes.csv* and *medalist.csv*)
2. If the gender ratio of the Olympics has changed over the years (*athletes.csv* and *medalist.csv*)
3. If the previous 10 host countries have an advantage in winning medals (*Olympic_host.csv*, *athletes.csv*, and *medalist.csv*)
4. Medal distribution across the world in 2024 (*medalist.csv*)
5. If the GDP or population of a country impacts the medal count in 2024 (*medalist.csv* and *world-gdp-data.csv*)
